

Leave your **Legacy**

Legacy is about life and living. It's about learning from the past, living in the present, and building for the future.

Where do you think it's best to plant a young tree: a clearing in an old-growth forest or an open field? Ecologists tell us that a young tree grows better when it's planted in an area with older trees. The reason, it seems, is that the roots of the young tree are able to follow the pathways created by former trees and implant themselves more deeply. Over time, the roots of many trees may actually graft themselves to one another, creating an intricate, interdependent foundation hidden under the ground. In this way, stronger trees share resources with weaker ones so that the whole forest becomes healthier. *That's legacy: an interconnection across time, with a need for those who have come before us and a responsibility to those who come after us.*
